For all of these, imagine that there is a list of integers called "numbers".

A. Write a program to print one randomly selected item from the list of numbers.

B. Write a program to ask the user to enter a number. The program should then search the list and print "Yes" if the number is in the list and "No" if it isn't.

C. Write a program to find and print out the biggest number in the list.

D. Write a program to count all of the numbers in the list that are bigger than 50.

E. Write a program to ask the user for a new number. If they enter a negative number, add it to the start of the list. If it's positive, add it to the end.
